

Duct Knives / Insulation Knives

Klenk Dual Duct Knives

Heavier and Thicker Blade is Superior to Many Imitations!

Klenk's Dual Duct Knives give contractors a choice -- the traditional rosewood handle or the ergonomic rubber handle. The rosewood handle and the ergonomic rubber handle offer the same high standards of quality construction and reinforcement.

Both knives share the same outstanding features:

- Stainless steel, 3mm blade, serrated on one edge and smooth on the other -- a heavier and thicker blade than other knives.
- Designed to cut duct board, flex-duct, and insulation.
- Slim, reinforced, Ripstop nylon sheath is included.
- An optional, leather sheath can be purchased separately. (See below.)

Ergonomic Rubber Molded Handle: Built-in grips increase comfort and give you an easy grip.
